

# Sprint 2 Report

## UCSC Parking App

Brain Swans

11/07/15

### Actions to stop doing

- Not attending meetings.

The project will only be successful if members are dedicated to showing up. Meetings are the least of requirements for the project; if we can't even aim to achieve good to perfect attendance, this project is going to be in serious trouble.

- Waiting on options

In this Sprint, a lot of time was wasted waiting for responses that had a high chance of not working out. Rather, we need to decide on a concrete idea that will be very likely to succeed and proceed from there.

### Actions to start doing

- Attend meetings:

Attendance is mandatory. Efficiency will only increase if attendance is perfect.

- Designated group work:

Come up with a scheduled time to work together as a group.

- Keep track of hours better:

Update hours regularly to note progress.

- Be more decisive:

Decide on how we're going to approach an issue and set forth doing so, rather than introduce extra options that may slow down the progress towards the final goal.

## Actions to keep doing

- Communicating with outside relations

Continue to communicate with outside sources who may provide funding to help push the project along.

- Development

Swift development of needed features, both front and back end.

## Work completion

Completed stories:

- US2: As a developer, I need to set up a database to store information about available parking spaces.

Incomplete stories:

- US4: As a Developer, I need to fetch data from the database so the app can be updated in real time.
- US3: As a User, I need the sensors to relay parking information to the database in real time.
- US1: As a User, I need to retrieve information from the mobile app so I can view the available parking spots.

## Work completion rate

- ()% of user stories were completed in this Sprint
- Total est. ideal work hours completed: () hrs
- Nbr days in Sprint: 17 days
- Ideal work hrs/day : () hrs
